

PROPS in React JS Date: _____

* website :- Multiple pages - HTML, CSS, JS

* webAPP :- single page :- React JS

* where we use HTML + JS both that called JSX

JSX :- i) stand for Javascript in XML
ii) write HTML in React

* we have to use `<>` `</>` for multiple div or any other tag.

* comment in child tag by
`<!-- * -->`

* for directly import use last
ext + space.

Date: 16/7/23

Q: RJS is an library or framework

Ans:- React JS is a library

Framework:- The classes and structure are pre-define and MVC based architecture
eg:- Bootstrap:-

Library:- you have to make it all structure

eg:- React.

* CDN :- content Delivery Network, copy links and use it.

* what is React Element

Ans:- objects.

* In our app only one root and one render method.

Date:

* we can make use react in any application only we have to make a root

<div #root>

</div>

* for run the react app we ^{first} use root Id then render that root

* § 3 // for props passing.

Home work :- what is async and differ

* If we want to pass multiple children div in React the use and pass as an array.
